

英文 (III): 職場商旅 期中書面報告

U11416019 資科一 朱芊靄

Interview career : Logistics Specialist

a..此職業的職場現況描述 (如工作內容、福利、平均薪資、須具備的專業等) 如: 老師、教練、公務員、心理諮商師、工程師等

The work I decide to interview is called Logistics Specialist. The role is basically like being the brain of a company's supply chain. Its' main job is to make sure goods move smoothly through worldwide imports, exports, and even domestic shipping. It's not just about moving boxes; you need to be an expert in customs broker operations and know exactly how to handle bonded goods to stay compliant with the law. In the current job market, especially at big international companies, it's a high-stakes but rewarding role. Companies today really value people who can solve problems on the fly and negotiate well. To sweeten the deal, many offer great perks like working from home and full health insurance for worker's whole family.

b.訪問一位該職業相關人士: Background of the interviewee (如受訪者背景、工作年資等)、 Interview questions and answers /

I had the chance to interview a true veteran in the field who has over twenty years of experience. She actually graduated as an English major from a foreign languages department. Sharing how their English skills is important for handling tricky international trade documents and talking to partners all over the world. After two decades of doing everything from hands-on customs work to managing high-tech semiconductor shipments, their biggest takeaway was that you have to be flexible. She mentioned that things go wrong all the time in global shipping, but being able to fix those puzzles is what makes the job exciting. Having a supportive company that offers remote work and family benefits has kept her motivated throughout long career.

C. 心得 (Reflections)

Interviewing a seasoned professional with over twenty years of experience was a truly enriching experience, giving me a profound understanding of the importance of English in international communication. Before this, I always thought of English as just a general skill, but this interview made me realize its crucial role in international work.

Although I'm a computer science student, my core work involves coding and technical logic, not supply chain management. My interest and curiosity in this industry stemmed from a part-time experience at a parcel logistics company during university. Working on the front lines of parcel handling, such as packing and shelving, gave me a basic understanding of the actual transportation of goods. This interview, however, exposed me to the back end of operations—the complex coordination of customs, bonded goods, and global compliance. It made me realize that strong cross-border communication skills are key to effectively solving problems. This experience prompted me to view my technical studies from a more global perspective, as I know that career success requires a combination of professional skills and language proficiency. Furthermore, through this interview, I learned more about multinational companies, such as the many benefits they offer, like working from home, multiple opportunities to visit and travel to overseas companies, and very attractive salaries.
